

STAINLESS STEEL PRESSURIZED TANK

Cold Glue Dispensing

With Valco Melton's stainless steel pressurized tanks, system pressure is easily modified to fulfill an extensive range of gluing applications. Stainless steel pressurized tanks are available in 1, 3, 5, and 10 gallons. The air regulator assembly assures precise control of the amount of adhesives over a broad span of applications. The strainer manifold included with the tank assembly has provisions for up to four fluid outlets. Air does not enter the glue hose when the tank is refilled because the feed pipe is mounted in the tank shoulder, eliminating air pockets.

- Stainless steel filter elements available in 16, 30, 50, and 100 mesh
- Corrosion resistant-- All components of the fluid section are stainless steel, nylon, and Teflon

Two Tank Options:
